

May 6, 2011

Our police department has been using Odyssey Batteries for nearly two years. We are very pleased with the performance of this product and I would recommend Odyssey batteries for use in law enforcement patrol vehicles.

We have installed Odyssey Batteries in 17 patrol vehicles. Prior to installing Odyssey Batteries we were going through vehicle batteries approximately every six months. We found that once other brands of batteries were drained that they never performed well again. We tried three or four brands of batteries with the same results. When an Odyssey Battery is drained and charged it recovers. We have never had to replace or return an Odyssey Battery.

Our vehicles are fully equipped with emergency lights, mobile data computers, mobile video recorders and police radios. Typically our batteries get drained when equipment is accidentally left on or when we have an unexpected electrical draw.

Since installing Odyssey batteries we very rarely have to jump start our vehicles. Jump starting vehicles used to be a very frequent occurrence. When we do have to jump start a vehicle its Odyssey Battery recovers after charging and still performs very well. We don't have to replace the Odyssey Battery. Odyssey Batteries save us labor time and costs by reducing the frequency we need to jump start vehicles, the labor and costs associated with testing batteries, and the labor and costs of frequently replacing vehicle batteries.

Odyssey Batteries are an excellent product and the highest performing, toughest, vehicle battery I have ever used.

Lieutenant Jim Nielsen
Moorhead Police Department
Moorhead, Minnesota
