RE: PC625 revised termination

In an effort to improve our ODYSSEY® battery Extreme Series™ product line, EnerSys is pleased to announce the enhanced cover and terminal of the ODYSSEY battery Extreme Series PC625.

The Engineering team has re-designed the lid and terminal to mimic the bracket design as seen on ODYSSEY battery Extreme Series PC535 in an effort to enhance the connection reliability and integrity. The new design has been produced and is currently in Warrensburg inventory. However, there is existing old design product (approximately 1400 pieces) in inventory that will need to be exhausted before the new design product is released for orders.

Here is a rendering of the new PC625:
