EnerSys® to Feature ODYSSEY® Battery BIGFOOT® #20 Monster Truck — World's First and Only Electric Monster Truck — at 2015 SEMA Show

READING, Pa. (November 2, 2015) – EnerSys® (NYSE:ENS), the global leader in stored energy solutions for industrial applications and manufacturer of ODYSSEY® batteries, is featuring the world's first and only all electric-powered monster truck at the 2015 Specialty Equipment Market Association (SEMA) Show. The ODYSSEY® Battery BIGFOOT #20 Monster Truck will be displayed Nov. 3-6 in the SEMA Show's Feature Vehicle area adjacent to the Las Vegas Convention Center, Las Vegas, Nevada.

The ODYSSEY® Battery BIGFOOT #20 Monster Truck carries a custom-designed fiberglass body and includes a battery-powered electric motor — designed and built by Dennis Berube of Phoenix, Arizona — to yield high-horsepower and high-RPM capabilities. Three banks of 10 ODYSSEY® batteries power the engine for a total of 360 volts. Six additional ODYSSEY® batteries power the brakes and steering systems. Other custom features include on-board battery chargers and a variable-speed programmable speed controller.

The 36 ODYSSEY® Extreme Series™ PC1200 batteries each weigh 38.2 pounds and provide 1,200 five-second Pulse Hot Cranking Amps (PHCA), as well as 540 Cold Cranking Amps (CCA) and 78 minutes of reserve capacity. That's enough power

to crush cars for over half an hour!

The ODYSSEY® Battery BIGFOOT #20 Monster Truck's electric drive train has a number of benefits compared to its fuel-injected counterparts.

"The all-electric drive train requires no gasoline, completely eliminating the noise and emissions inherent to fuel-powered vehicles," said Maria Orlando-Krick, marketing content and sponsorship manager at EnerSys. "We are proud to power this industry-first, all-electric monster truck and strive to continue to deliver innovative power solutions to meet the needs of today's high performance vehicles."

ODYSSEY® Performance Series™ batteries and the higher capacity Extreme Series™ batteries are designed with an Absorbed Glass Mat (AGM) construction and Thin Plate Pure Lead (TPPL) technology for more engine-cranking power and reserve power than conventional batteries.

ODYSSEY® batteries feature a three- to 10-year service life and two-year storage life at 77 degrees Fahrenheit (25 degrees Celsius). They are vibration resistant, classified as "non-spillable" by the U.S. Department of Transportation and include a limited two- to four-year full replacement warranty.

ABOUT ENERSYS®

EnerSys, the global leader in stored energy solutions for industrial applications, manufactures and distributes reserve power and motive power batteries, battery chargers, power equipment, battery accessories and outdoor equipment enclosure solutions to customers worldwide. Motive power batteries and chargers are utilized in electric forklift trucks and other commercial electric powered vehicles. Reserve power batteries are used in the telecommunication and utility industries, uninterruptible power supplies, and numerous applications requiring stored energy solutions including medical, aerospace and defense systems. Outdoor equipment enclosure products are utilized in the telecommunication, cable, utility, transportation industries and by government and defense customers. The company also provides aftermarket and customer support services to its customers from over 100 countries through its sales and manufacturing locations around the world.
